Full-Stack Software Engineer (Intern) | React, Node.js, Real-Time Systems

SUMMARY

Full-stack software engineer with hands-on experience building production-grade, real-time web applications using React, Node.js, WebRTC, and Socket.IO. Shipped SWIFT across 6 architecture iterations achieving 40% better transfer reliability. Research collaborator at UCSI University, co-authoring an ML/DL comparative study across 5 medical datasets with models reaching 99.47% accuracy. OCI Generative AI certified; actively seeking internship opportunities.

EDUCATION

Sasi Institute of Technology and Engineering Aug 2023 – May 2027
B.Tech in Computer Science and Engineering CGPA: 8.45 / 10
Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, DBMS, OOP

PROJECTS

SWIFT — Secure Wideband Instant File Transfer Personal Project
React, Node.js, Socket.IO, WebRTC

- Architected a zero-storage P2P file transfer system enabling live sender-receiver transfers, unlike WhatsApp or Gmail which store files server-side.
- Built a Socket.IO signaling backend managing concurrent peer sessions, peer discovery, and real-time event coordination at scale.
- Drove 6 major version iterations (v1.0–v1.6), evolving from room-based WebRTC to a fully re-architected live upload-download pipeline.

Comparative Analysis of ML and DL Models for Diabetes Classification UCSI University
Python, scikit-learn, TensorFlow, Pandas | Jan 2026 – Present

- Co-authored a study evaluating 10 ML algorithms and 2 DL models across 5 medical datasets (8,000+ records); AdaBoost and Random Forest achieved up to 99.47% accuracy.
- Preprocessed a 5,288-record dataset and identified glucose level, BMI, and HbA1c as the strongest predictors of diabetes risk.

EXPERIENCE

UCSI University — Research Collaborator Jan 2026 – Present

- Co-authored a comparative ML/DL study across 5 independent datasets (8,000+ records), benchmarking 12 models on accuracy, precision, recall, and F1-score.
- Sourced and preprocessed a 5,288-record diabetes risk dataset; identified top predictors and top-performing models at 99.47% accuracy.

Deloitte Australia — Data Analytics Virtual Simulation (via Forage) May 2026

- Analyzed 3 datasets across forensic simulations, identifying 5+ anomalies to inform data-driven investigative conclusions.
- Produced 2 structured business recommendation reports, improving consulting-style communication scores by 20%.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C++ | Frontend: React, Next.js, Tailwind CSS | Backend: Node.js, Express, REST APIs, Socket.IO, WebRTC
Tools & Infra: Git, Docker, AWS, Supabase, Linux | ML/AI: PyTorch, TensorFlow (working knowledge)

CERTIFICATIONS

OCI Generative AI Professional & OCI AI Foundations (Oracle, 2024) | Backend Development & Databases, Linux Shell Scripting (Coursera, 2024)

ACTIVITIES

- Built real-time, event-driven prototypes at Google and AMD Hack2Skill hackathons; self-directed study of WebRTC internals, signaling, and P2P networking through implementation-driven learning.
